

Executive Marketing Diagnostic Brief

Northstar Leadership Institute | Demonstration Output

DEMONSTRATION OUTPUT. This brief combines synthetic prospect inputs with illustrative public evidence. Synthetic information is not verified client evidence.

Call Snapshot

Prospect	Maya Chen, VP Marketing & Communications	Lead Source	PR partner referral
Organization	Northstar Leadership Institute	Call	Executive Marketing Diagnostic
Context	Established service organization with a lean internal marketing team	Commercial status	Budget and scope not validated

The Situation

[SYNTHETIC_DEMO_INPUT] Northstar is active across thought leadership, webinars, email, paid promotion, PR, and partner events, but leadership is questioning whether that activity is creating enough qualified demand.

[SYNTHETIC_DEMO_INPUT] Maya's current read is that the website receives attention but does not turn enough of it into conversations. She wants to understand whether the friction sits in the website, messaging, channel mix, measurement, or the connections between them.

Why now: leadership wants clearer evidence of marketing impact while the team is simultaneously trying to grow corporate engagements and support individual program enrollment.

Scorecard Signals

Dimension	Demo signal	What it may warrant exploring
Discoverability	58/100	Whether discovery extends beyond branded demand to relevant buyer problems.
Credibility	74/100	Whether existing proof is visible at the moments buyers need it.
Performance	43/100	Whether meaningful actions and downstream opportunity progression can be measured.
Agility	49/100	Whether website dependencies are slowing campaigns and content execution.

SCORECARD_RESULT != ROOT_CAUSE

Preliminary FAST Read

Lens	Status	Pre-call read
Flexible	HYPOTHESIS	Outside support for routine changes may be contributing to slower execution.
Accessible	INSUFFICIENT EVIDENCE	No accessibility conclusion from available demo evidence.
Strategic	HYPOTHESIS	Multiple audiences and offers may be competing for attention rather than creating clear paths.
Trackable	HYPOTHESIS	Technology appears present, but the connection from meaningful website action to business outcome is unknown.

What Appears Connected

The prospect's concern about lead generation may intersect with buyer-path clarity, proof visibility, and measurement rather than representing a traffic problem alone. **[HYPOTHESIS]**

Corporate and individual growth priorities may require different journeys, offers, proof, and conversion actions even though they currently share one digital environment. [HYPOTHESIS]

A high level of marketing activity combined with incomplete downstream measurement may be making both performance and prioritization difficult to judge. [HYPOTHESIS]

Working Hypotheses

Hypothesis	Evidence supporting	Evidence against / limitation
1. Buyer-path architecture may be obscuring the most relevant next step.	Multiple audiences/offers share navigation; generic CTAs are visible. [OBSERVED — ILLUSTRATIVE]	No behavioral path analysis or conversion data. [UNKNOWN]
2. Strong credibility may not be deployed where it most affects buyer confidence.	Expert credentials, logos, testimonials and research exist but are distributed. [OBSERVED — ILLUSTRATIVE]	We have not validated which proof buyers actually use. [UNKNOWN]
3. Measurement gaps may be amplifying the perception that the website is underperforming.	Prospect cannot connect activity to opportunities. [SYNTHETIC_DEMO_INPUT]	Analytics/advertising technology appears present; implementation quality is unvalidated. [OBSERVED/UNKNOWN]
4. Operational dependence may be contributing to marketing friction.	Prospect reports outside support for routine website changes. [SYNTHETIC_DEMO_INPUT]	Actual workflow, turnaround time and constraints are unvalidated. [UNKNOWN]

What We Don't Know Yet

Unknown	Why it matters
What counts as a qualified opportunity?	Without this, 'more leads' is not a useful success definition.
Which buyer path is the commercial priority?	Corporate and individual journeys may require different strategic emphasis.
What is the actual website conversion baseline?	The prospect's perception cannot establish performance.
How are lifecycle stages and sources governed in HubSpot?	Attribution and opportunity progression may be unreliable or incomplete.
Which channels create the best opportunities?	Activity and traffic alone cannot establish buyer quality.
What does the website-change workflow actually look like?	Needed before concluding that agility is a root issue.
What has leadership already committed to?	Needed to separate strategic readiness from commercial readiness.

Questions Worth Asking

1. When a genuinely good corporate opportunity comes in today, what usually happened before that person contacted you?
2. When leadership says marketing needs to create more qualified demand, what would they consider a qualified opportunity?
3. Between corporate engagements and individual enrollment, where is the greater business priority right now?
4. What can you reliably see today from first marketing touch through inquiry, opportunity, and outcome?
5. Where does the team lose the most time or momentum when trying to launch or change something on the website?
6. What do your best-fit buyers usually need to understand or believe before they are ready to have a conversation?
7. If we learned the website itself was only part of the issue, how open is leadership to addressing the connected messaging, measurement, or operating problems?

Preliminary Fit Read

Fit signals	Risk / unresolved signals
Established service organization with active marketing. [SYNTHETIC_DEMO_INPUT]	Budget and commercial readiness are unknown.
Lean team coordinating multiple channels and partners. [SYNTHETIC_DEMO_INPUT]	Root cause is not established.
Website appears commercially important across multiple buyer journeys. [HYPOTHESIS]	Leadership priorities between buyer paths are unresolved.
Buyer is explicitly asking for diagnosis before a predetermined tactic. [SYNTHETIC_DEMO_INPUT]	Authority for a future commercial decision is shared.

Pre-call status: Potential fit. Human Diagnostic required before route decision.

Guardrails for This Call

Do not conclude that traffic, SEO, messaging, website architecture, tracking, or operational agility is the root cause.

Do not treat the Scorecard as diagnosis. Do not prescribe a redesign. Do not price from this brief. Do not imply Blueprint or Foundation is predetermined. Do not convert the prospect's statement that the website is not generating enough leads into a validated performance finding.

Call Objective

By the end of the 25–30 minute conversation, understand what is actually happening, why it matters now, what business consequence it creates, which hypotheses became stronger or weaker, what remains strategically unknown, whether the problem fits SimpliCreative, and what next route is responsible.

AI organizes the evidence, surfaces the pattern, and preserves the reasoning. The human strategist decides what it means and what SimpliCreative should do next.
